

DAM WARNING SIRENS TO BE TESTED MARCH 6 IN GEORGETOWN

At Xcel Energy, safety is at the foundation of all we do. To protect your community, we've installed four early warning sirens to warn people in Clear Creek County of potential flooding. In the unlikely event of a dam failure at Xcel Energy's Cabin Creek or Georgetown hydroelectric plants, the siren would sound an alert tone followed by instructions. See the back of this card for more details.

What to expect

Federal regulations require that we place these early warning sirens in the community and test them periodically. Four early warning sirens are installed at:

- **Xcel Energy Georgetown Substation, 600 Griffith Street**
- **Werlin Park, 11th and Taos Street**
- **Meadows Park tennis/basketball courts, Main Street (south of Skyline Drive)**
- **Georgetown Lake west shore, Tom Bennhoff Lake Trail (north of the restrooms)**

The first test of the new system will be March 6, 2024, at 10 a.m. — and will be repeated the first Wednesday of every month. The test will last approximately 30 seconds, with a distinctive siren and voice message. Depending on how close you are to these siren locations, you may want to stay indoors, and keep children and pets indoors.

The safety and well-being of our customers and communities is our top priority. Find more information about hydroelectric plant safety, including dams and surrounding waterways, by visiting [xcelenergy.com/Safety](https://www.xcelenergy.com/Safety) or scanning the QR code.
